

BANG CHI DUONG

<https://bangchi.tk>

Email: bangchi.duong.20193@outlook.com

Mobile: +1-778-955-6605

SKILLS

- **Languages:** Python, R, C++, Java, Javascript, SQL, HTML5, CSS3, Perl
- **Frameworks:** Webpack, Typescript, React, Bootstrap, NodeJS, Express, TensorFlow
- **Machine Learning:** Generalised Linear Model, Dimension Reduction Analysis, Deep Learning, Time Series Analysis

EDUCATION

- **University of British Columbia** Vancouver, Canada
Bachelor of Computer Science (BCS); GPA: 84.20/100.00 Sep 2017 – Apr 2020
- **University of Guelph** Guelph, Canada
Master of Bioinformatics; GPA: 91.00/100.00 Sep 2016 – Aug 2017
- **University of Toronto** Toronto, Canada
Bachelor of Science (Hons) in Physics, Statistics and Chemistry; GPA: 3.73/4.00 Sep 2012 – Aug 2016

EXPERIENCE

- **Technical Safety BC** Vancouver, Canada
Data Scientist May 2019 – Aug 2019
 - **API Backend Microservice - Flask/Docker:** Build an API backend microservice for the data science team to efficiently share data with other teams/departments
 - **Web Scraping - Python:** Build a web scraping tool to gather available public data on building permits
 - **PDF Information Extraction - Python:** Build a simple tool to extract information into other formats (CSV/JSON) from specific PDF files
 - **Data Cross-Referencing - Python:** Explore insights from cross-referencing public data with in-house data
 - **Financial Forecast - Python:** Apply time series techniques on financial data
- **Ubisoft - La Forge** Montreal, Canada
AI Programmer Sep 2018 – Dec 2018
 - **Published Paper - SCA 2019:** Daniel Holden, Bang Chi Duong, Sayantan Datta, and Derek Nowrouzezahrai. 2019. Subspace neural physics: fast data-driven interactive simulation. In Proceedings of the 18th annual ACM SIGGRAPH/Eurographics Symposium on Computer Animation (SCA '19), Stephen N. Spencer (Ed.). ACM, New York, NY, USA, Article 6, 12 pages. DOI: <https://doi.org/10.1145/3309486.3340245>
 - **Data Acquisition - Maya nCloth:** Generated/Extracted a pool of interactive cloth and soft body data
 - **Deep Learning - Python:** Extracted a compact subspace representation of (256/128/64) bases from ~10,000 dimensions using PCA, and trained neural networks entirely in the subspace to predict future motion trajectory
 - **Interactive Runtime Application - C++:** Integrated the learned models into a C++ runtime application
 - **Result:** Achieved a fast data-driven interactive subspace simulation, with performance gains from 300 to 5,000 times compared to the standard physics simulation in Maya
- **Structural Genomics Consortium (SGC)** Toronto, Canada
Bioinformatics Analyst May 2017 – Aug 2017
 - **Visualisation:** Analysed sequencing data using R, with graphical visualisations such as multidimensional scaling, principal component plot, heatmaps, and volcano plots, supported by different R packages such as ggplot2, limma, and edgeR
 - **Differential Analysis:** Constructed Generalised Linear Models and a Peptide-based Model, resulting in about 1,000 differentially expressed genes (RNA-Sequencing data) out of a pool of approximately 13,600 genes, and about 200 differentially expressed proteins (proteomic data) out of a pool of approximately 4,500 proteins

PROJECTS

- **Movie Review Web App - Webpack/TypeScript/MongoDB/Express/React/NodeJS:** Built a full-stack web application to find and review movies; <https://cs490-project-movie.herokuapp.com/>
- **Car Detection - Python:** Detect cars in images using Linear-SVM model on features extracted from HOG method
- **Lossy Image Compression - C++:** Compress images using space partitioning trees, specifically 2-D trees
